

UAT KIT

user acceptance testing kit

The UAT Kit

Testing documentation

Apple iPod Touch, HTC Evo, T-Mobile Sonic 4G Hotspot, and accessories

WHAT IS A UAT KIT?

The purpose of the kit is to aid our client UAT process by providing a selection of popular mobile devices and a high-speed Internet connection. The primary goal is to ensure that the release candidate meets client expectations and is ready for launch.

WHO RECEIVES THE UAT KIT?

Each of Branding Brand's clients receives the UAT kit for testing prior to a mobile site launch.

The period of time with the UAT kit varies slightly depending on the project schedule. Once testing is complete, the UAT kit is returned to Branding Brand using pre-paid postage.

WHAT'S IN THE UAT KIT?

The Kit Includes The Following Devices:

- Apple iPod Touch (iOS)
- HTC Evo (Android OS)
- T-Mobile 4G Hotspot

The iPod Touch and Evo represent a large portion of mobile users and provide a stable base for viewing your mobile site. The hotspot offers high-speed Internet access for the enclosed devices, making testing easier and faster.

The Kit Includes The Following Documentation:

- How to report bugs and use the UAT Suite
- Tips for testing on the Apple iPod Touch
- Tips for testing on the HTC Evo
- Tips for setting up and using the T-Mobile 4G Hotspot
- Testing schedule (determined prior to development)
- FAQs

HOW TO REPORT BUGS

In addition to the UAT kit, Branding Brand clients receive access to the UAT Suite, a bug-reporting dashboard, powered by JIRA, that facilitates communication between UAT, Project Management, and Development teams.

The UAT Suite allows users to submit issues, track progress on all user-reported issues, and view closed issue statistics. Detailed documentation is provided in the kit.
